TRADE PANEL + JOURNAL FOR METATRADER 5 · XAUUSD

v3.00 · November 2026

Trade Manager

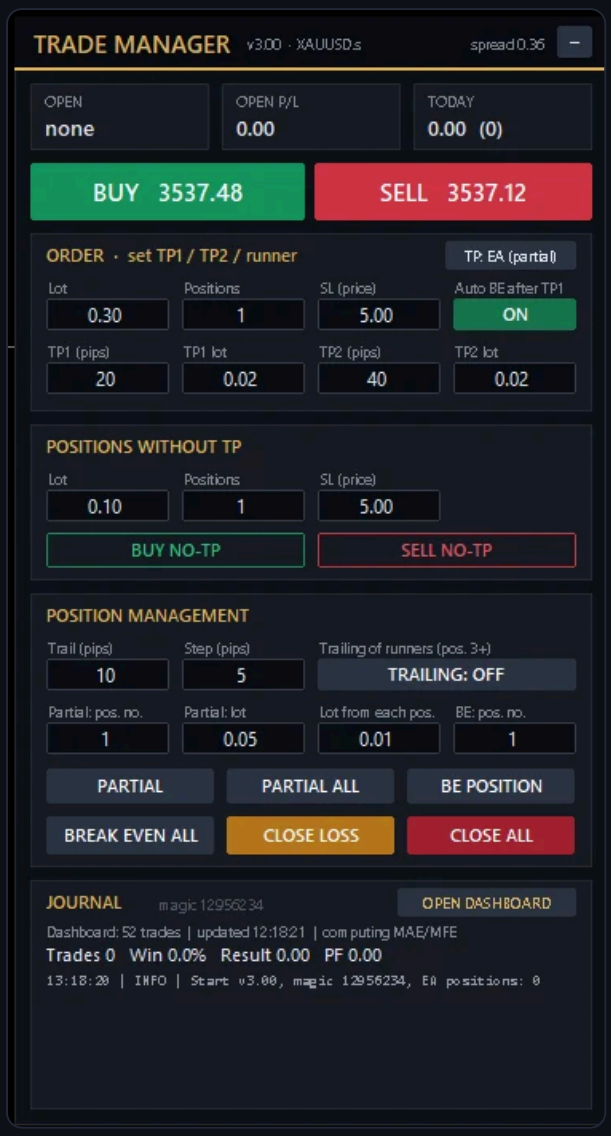

A panel for traders who take their own gold entries. One click opens a whole plan: the stop loss goes out with the order, the first targets take partial profit, the rest of the set moves to break even and the runners trail. The journal built into the same EA then shows what your trading really does.

1 click opens a set of positions with TP1, TP2 and runners	**0 s** without a stop loss: it is sent with the order	**2 in 1** trade panel and journal dashboard in one EA	**$39** one-time purchase, lifetime licence

The panel is not a robot. It opens, changes and closes trades only when you click; the automatic steps (partial close at TP1/TP2, break even, trailing) follow the settings you chose for that set.

THE PANEL

Everything on one chart

The panel on an MT5 gold chart (demo account, no open positions).

- **Live tiles.** Open positions and lots, open P/L, today's result and number of closes.
- **BUY / SELL** with the current price. The "–" button shrinks the panel to the tiles and these two buttons.
- **Order.** Lot, number of positions, stop loss in dollars of price, TP1 and TP2 in pips (1 pip = $0.10) and how much each target closes.
- **Positions without TP.** Own lot, count and stop loss; never trailed, closed by you.
- **Position management.** Trailing for runners, partial close of one position or of all, break even for one position or all, close losing, close all.
- **Journal.** Dashboard status, overall statistics of the panel and a colour-coded event log.

Every value you type is remembered. The running set survives a terminal restart, a recompile or a timeframe change.

HOW A SET WORKS

One click, a whole plan

TP mode · EA (partial)

Targets as partial closes

The panel watches the price. At TP1 it closes the "TP1 lot" from position 1, at TP2 the "TP2 lot" from position 2; the rest of each position stays open. No TP order sits at the broker, so a tight target is never refused as an invalid stop.

TP mode · Broker

Targets as real TP orders

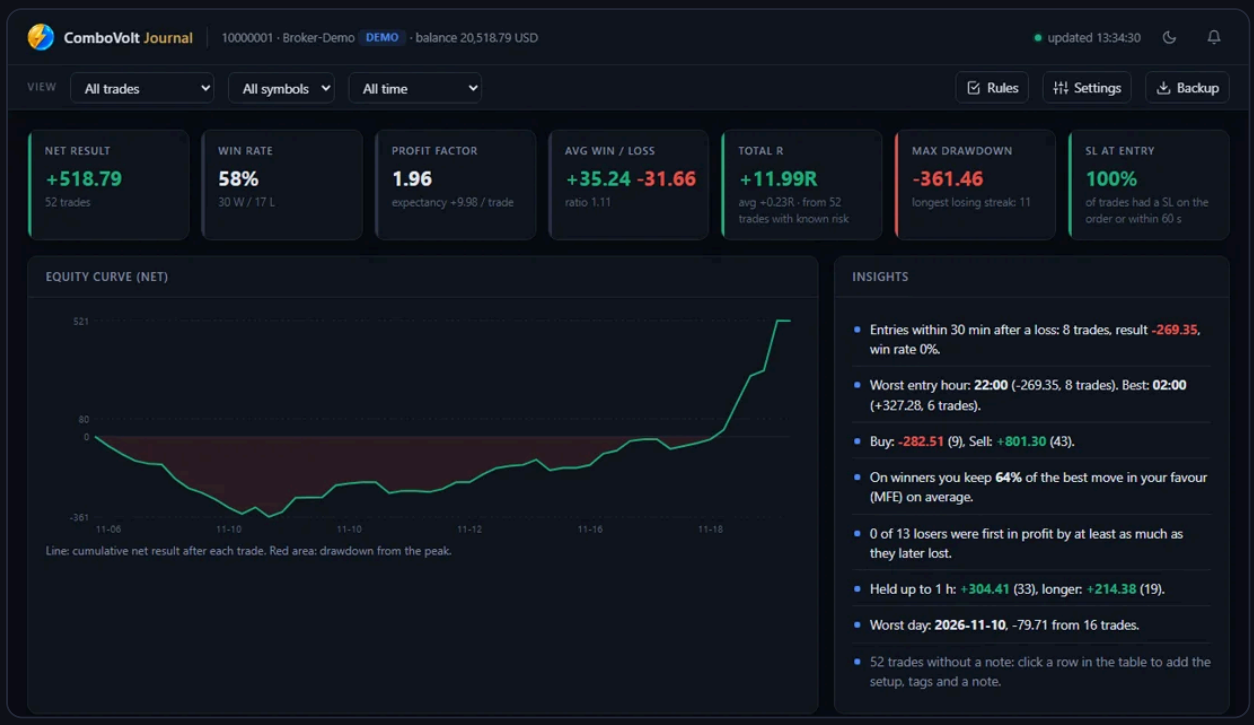

Position 1 gets a TP at TP1 and position 2 at TP2, set at the broker with the order. They close even while the terminal is off. Runners have no TP.

EXAMPLE	LOT 0.30 · 3 POSITIONS · SL $5.00 · TP1 20 PIPS · TP2 40 PIPS · AUTO BE ON · EA MODE
Click BUY	Three buys of 0.30 open, each with a stop loss $5.00 below the fill, sent with the order. Position 1 = TP1, 2 = TP2, 3 = runner.
+$2.00	TP1: 0.06 of position 1 closes in profit. Auto BE moves the stop loss of all three positions to their entry.
+$4.00	TP2: 0.06 of position 2 closes in profit.
Trend runs	With trailing on, the runner's stop follows the price 10 pips behind, in steps of 5 pips. Never moved back.
You decide	Partial close, break even, close losing or close all whenever you want, one click each.

After you type a lot, the panel suggests TP1 and TP2 lots of 20% of it. All values are yours to change. Break even never moves a stop loss that is already better than the entry.

JOURNAL INCLUDED

The journal writes itself

The dashboard in Chrome. Example data from a demo account (account details replaced).

- **Results** net of costs: win rate, profit factor, average win and loss, R multiples, drawdown, equity curve.
- **MAE / MFE** from ticks: how far each trade went against you and how much of the best move you kept.
- **Calendar, hours, weekdays, holding time** and plain-language insights such as "entries within 30 minutes after a loss".
- **Your rules**: trades per day, break after a loss, daily loss, max risk. The "Today" box says "You can trade", "Wait" or "STOP for today".
- **Notes and screenshots** for every trade, with tags for your setups.
- **Private.** Your trades, notes and screenshots stay on your computer; only the licence check goes online. A backup button saves it all to a file.

The journal reads the whole account history, so trades you place by hand in MT5 (desktop, phone, web) are included. Trades of other robots are shown separately.

Entry and exit, time held, how it closed, stop loss present, net result, R multiple, MAE/MFE and a check against your rules. Click a column to sort, click a row to open the trade.

Your note on every trade

NOTE

Setup: Breakout of the Asian range

Tags (comma separated): plan, London open

Emotion: 2 fine

Followed the plan?: yes

Planned SL price (for R): from MT5: 4138.91

Execution grade (1-5): 4

Why I entered / what I saw: Break below the Asian range low with a retest on M5. Stop above the retest high, target at the previous day low.

Mistakes and lesson: Entry was fine. Moved the stop to break even a bit late.

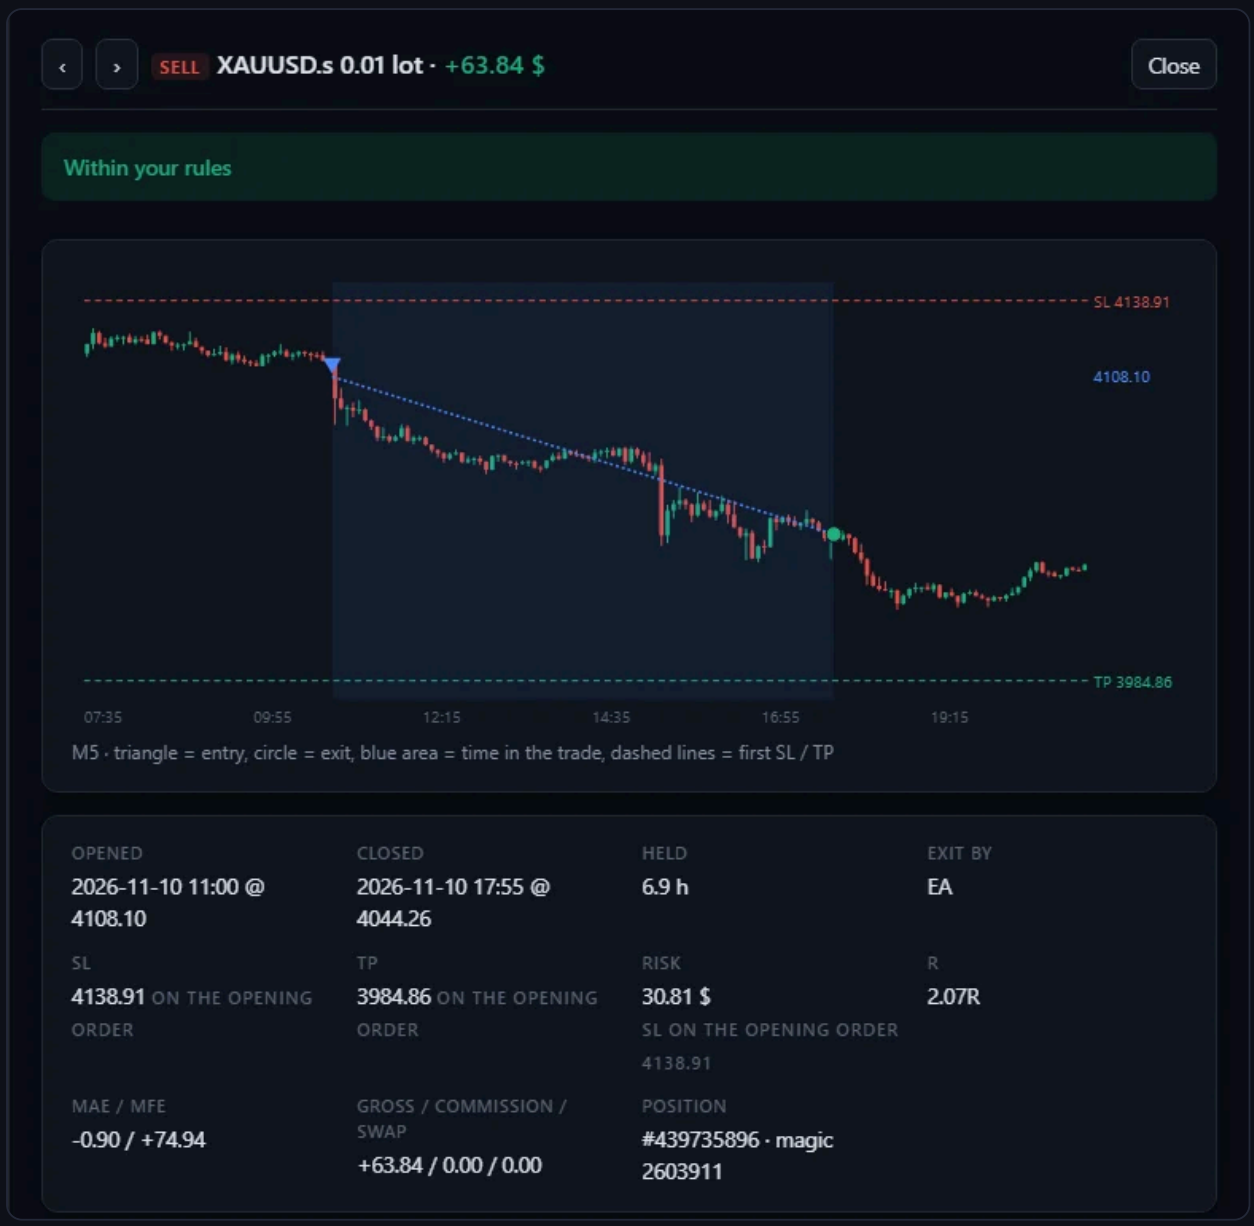

Save

Setup, tags, emotion, followed the plan, planned stop for R, a grade, what you saw and what you learned. Paste screenshots with Ctrl+V. The journal then sums results by setup and tag.

Screens from the dashboard with example data from a demo account (account details replaced; the note is filled in for illustration).

JOURNAL · ONE TRADE

Click a trade, see the whole story

- **The chart**: M5 candles around the trade with entry (triangle), exit (circle), time in the trade (blue area) and the first SL and TP.
- **Rules check**: "Within your rules", or which of your rules this trade broke.
- **Risk and R** from the stop loss on the order; MAE / MFE in dollars; costs split into gross, commission and swap. Arrows step to the previous or next trade.

DETAILS

Built to be safe

- **Stop loss with the order**, then re-anchored to the real fill price.
- **Close all means all**: every position of the panel on the chart symbol, including positions without TP and older sets.
- **Typo guard**: lot checked against the broker's step and minimum, at most 10 positions per click, "0,05" is read as 0.05.
- **Retries without spam**: a refused automatic step is retried every 2 seconds, not on every tick.
- **Tested**: 65 automatic checks in the MT5 Strategy Tester on real gold ticks (opening, targets, break even, restart, close all, broker mode).

What you need

Platform	MetaTrader 5 on Windows
Account	hedging (sets and partial closes)
Symbol	XAUUSD gold, 2-digit price
Chart	one chart, any timeframe
Browser	Chrome or Edge for the dashboard
Licence	one live + one demo account

PRICE

$39 one-time. Lifetime licence and 12 months of updates.

Risk disclosure

Trading gold CFDs on margin carries a high level of risk and can result in losses larger than expected. Trade Manager executes your own decisions and the settings you choose; it does not decide when or what to trade and does not promise any result. Automatic steps depend on the terminal running and on your broker's execution, spreads and trading hours; a stop loss can be filled at a worse price in fast markets or over a weekend gap.

The journal dashboard shows past results only. Example figures in this brochure come from a demo account. This brochure describes a software product. It is not investment advice, a recommendation to trade, or an offer of portfolio management. Use only capital you can afford to lose, and try the panel on a demo account first.
